

## ABOUT US

For 23 years, Radio-IP is designing and developing innovative software solutions for highly mobile workforces which need to securely communicate mission-critical data across multiple wireless networks. Our mobile VPN solutions come with extensive geographical coverage, uninterrupted connectivity and utmost safety to users.

## WHO WE ARE

- Software and Technology services provider.
- Privately owned Canadian company based in Montreal.
- Strong technical expertise - High-skilled teams.
- Proprietary and patented technologies.
- In-house R&D and Technical Support Teams in Montreal HQ.
- International customers and partners: Canada, USA, Central America, Europe, Asia, Australia

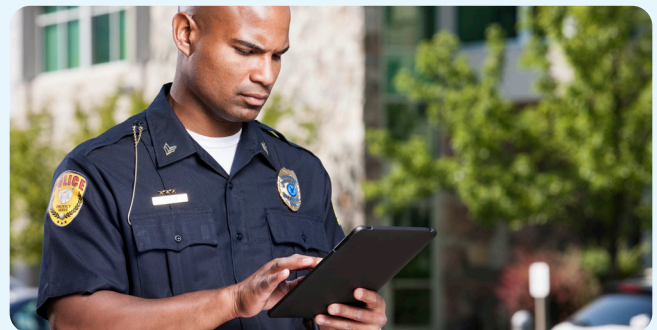

## Multiple Networks. Multiple Applications. One Mobile VPN

Mult-IP is a FirstNet ready & highly secure mobile VPN software solution developed to address the exacting needs of mission critical communications.

Mult-IP enables management of multiple, independent networks simultaneously within one mobile VPN, assuring secure uninterrupted connectivity for various mobile workforces — regardless of their location — while exceeding data protection regulations.

- For Windows devices
- Supports broadband and narrowband networks
- Ideal for Hybrid networks
- Concurrent Networks
- Disaster recovery
- Seamless and Transparent roaming
- Session persistence

## ARMADA

With Armada, be ready to meet the Mobility and Security Challenges caused by the tremendous growth of data exchanged through connected devices.

- For Android and IOS devices (Either on a phone, tablet, or PC used in the line of duty)
- Supports broadband networks.
- Fast and reliable access to information / Seamless and Transparent roaming
- Session persistence to ensure constant connectivity: stops application from crashing when connectivity is lost (i.e. blind spots)
- No user intervention required on lost connection event.
- Strong and rigorous authentication of connected devices.
- Data encryption exceeding the standards required by Public Safety, such as FIPS 140-2, HIPPA, or PCI.
- FirstNet Verified

Business-Mission-critical workforces need to rely on the quality of the service they receive from their data provider, and need to ensure to minimize loss of connectivity to support the requirements of their mission. This is why the Synopsis Monitoring and GPS tracking platform, combined with the Armada and Mult IP Mobile VPN solution from Radio IP answers both needs.

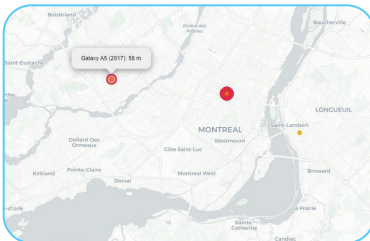

## SYNOPSIS MAIN FEATURES:

- Roaming events
- Live System Monitoring
- Mapping GPS and Signal Strength
- Alerting
- Bluetooth Connectivity Monitoring
- Web interface
- Data traffic analysis (circulating in the VPN tunnel)
- Report Editing on: Data traffic; Applications, Drivers, Groups etc....
- Analyzes and diagnostics of gateways load and clients
- Report on the use of wireless communications networks

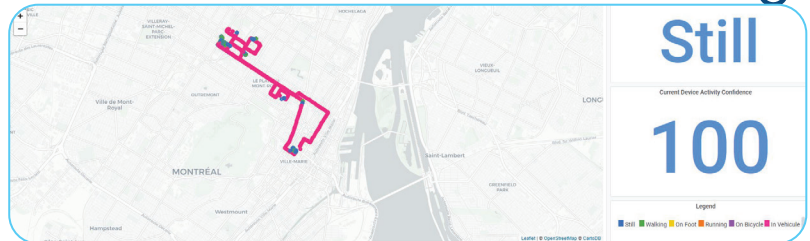

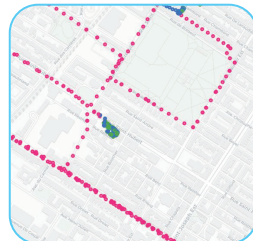

## SYNOPSIS REAL TIME MONITORING

Live Monitoring, Mapping, Alerting and Tracking

### GPS Accuracy Map
