

ARMIS + SERVICENOW

CLOSE THE CMDB VISIBILITY GAP FOR UNMANAGED AND IOT DEVICES

The number of connected devices that make their way into the enterprise grows every day. Analyst firm IDC estimates 42 billion connected IoT devices by 2025, while Juniper Research says there will be 83 billion by 2024. Whatever the actual number is, with Armis and ServiceNow, you can ensure these devices won't go unnoticed.

A unified, agentless approach to asset management

Armis® provides unified asset visibility and security in a single platform purpose-built for this new threat landscape of connected devices. It includes detailed device profiles and risk assessments to understand better and reduce your attack surface and continuously analyze every device to dynamically update risk scores in real-time so you can mitigate risks proactively.

The ServiceNow® Configuration Management Database (CMDB) is an easy-to-use, cloud-based single system of record for infrastructure and service data that helps you better understand your IT environment, including asset management, compliance, and configuration management. Together, Armis and ServiceNow provide a unified asset management solution for any device—managed, unmanaged, IoT, medical, OT, and more—in any environment.

Fast, frictionless deployment and integration

Getting started with the Armis platform is fast and easy. It's agentless, completely passive, and requires no additional hardware, which helps reduce deployment time and effort for IT or security teams, even in large, global, and complex environments. And, with our apps and connectors, which you can install right from the ServiceNow Store, integration between the two platforms is straightforward and fast, so you can get started seeing

Key Benefits

- Identify and classify managed, unmanaged, and IoT devices in real-time.
- Monitor device activity to true-up your CMDB with new device details.
- Create tickets for any device automatically to help identify and resolve issues quickly.

more devices—and more value—from your ServiceNow CMDB right away.

Continuous, reliable cybersecurity asset management

Having an asset inventory you can trust is critical for any IT or security team's success. But with so many devices in your environment today, many of which traditional asset management and security products can't even see, it's hard to know what's there—and what's not.

When integrated with the ServiceNow CMDB, the Armis platform makes sure ServiceNow always has the latest details (hardware, software, configuration, and more) about every device in your environment. The platform continuously and passively monitors devices for additional information it can use to true-up details in your ServiceNow CMDB, giving you accurate and trusted cybersecurity asset management.

Automated threat detection, response, and workflows

Incident responders have to be fast and efficient to keep your business safe. The Armis platform performs continuous, real-time risk analysis of device behavior, so it has the information needed to prioritize and remediate threats and incidents quickly.

If the Armis platform detects abnormal or suspicious device behavior, it can automatically generate investigation alerts, open trouble tickets, or trigger policy-based blocking or quarantine actions. This helps incident responders automate manual tasks so they can remain focused on maintaining positive security and risk postures.

Fast and Easy Integration

Everybody wants the deployment of a new solution to be successful. The Armis platform is agentless and requires no additional hardware, which reduces deployment time and effort for IT or security teams, even in large, global, and complex environments.

And, with the Service Graph Connector for Armis*, integration between the two platforms is fast and easy, so you can get started seeing more device and more value from your ServiceNow CMDB right away.

**Requires ServiceNow Orlando Patch 7, Paris, or later. For detailed requirements information, refer to the Service Graph Connector for Armis listing in the ServiceNow Store.*

About ServiceNow

ServiceNow (NYSE: NOW) is making the world of work, work better for people. Our cloud-based platform and solutions deliver digital workflows that create great experiences and unlock productivity for employees and the enterprise.

The Armis Device Knowledgebase

Core to the Armis platform is the extensive Armis Device Knowledgebase—the world's largest body of knowledge about devices and their behavior—which eliminates the need for any learning period or baselining.

It uses the collective intelligence of over one billion devices, their characteristics, vulnerabilities, and behaviors to identify and classify any device, evaluate risks, and stop threats accurately, quickly, and automatically.

Our knowledgebase understands what a device is and what it should (and should not) be doing. It compares a device to all similar devices to correlate its characteristics and behavior against known-good profiles of devices to identify issues or threats.

About Armis

Armis is the leading unified asset visibility and security platform designed to address the new threat landscape that connected devices create. Fortune 1000 companies trust our real-time and continuous protection to see with full context all managed, unmanaged, and IoT devices, including medical devices (IoMT), operational technology (OT) and industrial control systems (ICS). Armis provides passive and unparalleled cybersecurity asset management, risk management, and automated enforcement. Armis is a privately held company and headquartered in Palo Alto, California.
