

Discover and Manage Every Risk... See and Secure Every Asset

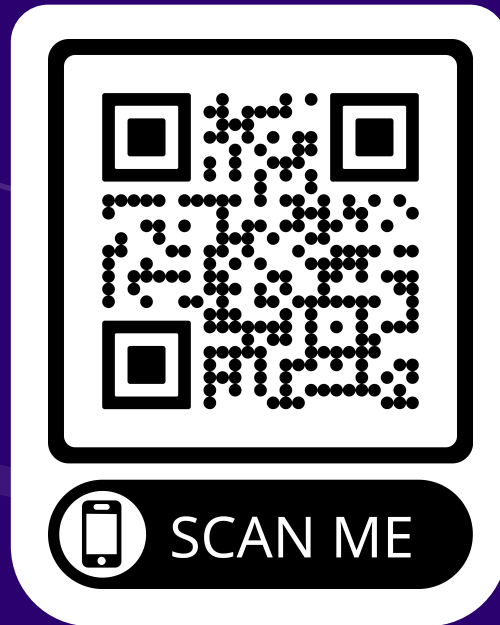

A unified asset visibility and security solution for Tribal Nations

Tribal nations are under cyber attack. There are 574 federally recognized tribes in the United States, and many operate casinos that deliver services to their people. Health services, educational services, infrastructure and agriculture often depend on this revenue, but these billions also make tribal nations increasing targets for ransomware attacks.

In these cyber battles tribal nations are totally outgunned. They are hampered by tight budgets, limited IT teams and a lack of trained cyber professionals. That's where Armis can help.

Armis provides unified asset visibility and security in a single platform purpose-built for this elevated threat landscape. Easy to deploy (often one hour), technology agnostic and simple to manage. Our platform gives tribal nations real-time, actionable situational awareness of vulnerabilities.
