

Delaware Valley Regional Planning Commission (DVRPC) Digital Alerting Program

Overview

The Delaware Valley Regional Planning Commission (DVRPC) has chosen NEWCOM to implement the Delaware Valley Region Digital Alerting program, enhancing first responder vehicles with digital alerting capabilities. NEWCOM will collaborate with regional agencies to install the system and activate HAAS Alerts Safety Cloud services.

DVRPC aims to equip 450 vehicles in the first year and continue the initiative for four years, with funding covering installation costs, subscription fees, and ongoing support services for previously installed vehicles.

Program Solution

This effort aims to create a regional program to deploy digital alerting technology in first responder and PennDOT vehicles. NEWCOM will collaborate with DVRPC to enhance relationships with partner agencies and provide data on the technology's usage.

Digital alerting, or Responder-to-Vehicle (R2V) technology, alerts motorists of responders' positions directly in their vehicles, increasing awareness of roadside hazards and encouraging compliance with Move Over, Slow Down laws to reduce serious incidents. The program will connect to over 100 agencies and equip 500+ response vehicles, along with PennDOT Freeway Service Patrol Vehicles.
