

## Public Safety

### Secure every visual detail in a new era of government

The Wall delivers a clear view of the mission so public safety personnel can make better decisions faster. When every second counts, The Wall is in a class of its own, providing public safety personnel with high-impact visuals that empower quick and accurate data analysis and enhance collaboration. Engineered to be easily installed, Samsung's most advanced display makes a bold statement in any mission-critical environment.

### Enhance situational awareness for better command and control

The Wall securely integrates multiple video feeds—such as live camera feeds, weather, live feeds and news—into a single, uninterrupted, high-resolution view so agencies can monitor crisis situations, dispatch response teams and coordinate efforts in real-time.

### Seamlessly integrate and collaborate to speed response times

Wireless content sharing and a multi-view function integrate and visualize data in a more actionable way so agency teams can enhance collaboration with stakeholders and improve crisis rescue and response times.

### Operate securely and confidently

The Wall is TAA-compliant and secured by Samsung Knox—a defense-grade security platform built in from the chip up, so agency data always remains protected.

### Rely on the brand proven to perform under pressure

Samsung's remote power operability delivers reliable performance, even in unstable environmental situations. The Wall is also built with durable technology that resists damage from impact, moisture or static shock to ensure always-on availability.

#### Use cases:

**Command & Control Center**

**Emergency Operations Center (EOC)**

**Real-Time Crime Center (RTCC)**
