Armis Centrix™ for Vulnerability Management Detection and Response

Shift from reactive scanning to real-time, evidence-based vulnerability detection

Intelligence-driven detection for a new era of vulnerability management

Traditional vulnerability scanners can't keep up with AI-powered cyberattacks and the constant flood of new exposures. With scan cycles stretching 4–6 weeks and static snapshots of risk, organizations are left reactive, exposed, and burdened with excessive false positives and network strain.

Smarter dynamic vulnerability detection

Traditional scanning can create operational headaches, made worse by false positives, lack of complete asset coverage, slow detection, and discovery gaps, making any protection measures reactive and ineffective. With Armis Centrix™, you can take control of your vulnerability management program with versatile vulnerability detection for the most advanced intelligent scanner in the market.

Armis Centrix™ for Vulnerability Management Detection and Response offers total control of your vulnerability detection with multi-layered discovery for greater accuracy, less disruption, and a unified vulnerability management experience across every asset type. It operates without agents and with 90% less network impact than traditional scanners. The result is more accurate intelligence, faster time-to-detect, and a safer experience for even the most sensitive environments.

Fine-tune your vulnerability management with complete control over how and when you discover, identify, and validate vulnerabilities.

Stop scanning, start securing: high-precision exposure management

Continuous awareness, not static snapshots

Eliminate 4–6 week scan cycles with ongoing, dynamic discovery.

Accuracy without overload

Reduce false positives (often 60–70% with legacy tools) through targeted queries and validation.

Lightweight and agentless

No agents, fewer scans, and minimal disruption to production systems or critical assets.

Operational efficiency

Free overextended SOC and IT teams from complex, resource-heavy scanner maintenance.

See, protect, and manage your entire attack surface

A layered detection approach

Intelligence-driven detection – Achieve over 75% of asset and vulnerability discovery for comprehensive visibility before performing a single scan.

Passive traffic monitoring – Enhance the base layer of detection with network data without adding additional traffic load.

Augment with collective intelligence – Bridge gaps with insights from the world's largest asset intelligence dataset (6.5B+ assets) and Armis' internal vulnerability database.

Selective active assessment – Run targeted queries using native protocols for minimal network strain and 90% less disruption than legacy scanners.

True risk validation – Determine exposure risk, validate vulnerabilities, and act with certainty on high-value assets.

Unlike other vulnerability scanners…

Armis Centrix™ for Vulnerability Management Detection and Response leverages advanced asset intelligence for smarter, less disruptive vulnerability detection, giving you the confidence to tackle the latest exposures with accurate, real-time information.

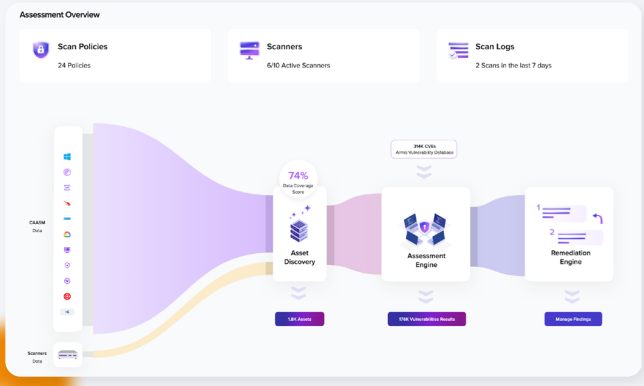

Accelerate your response with real-time exposure intelligence

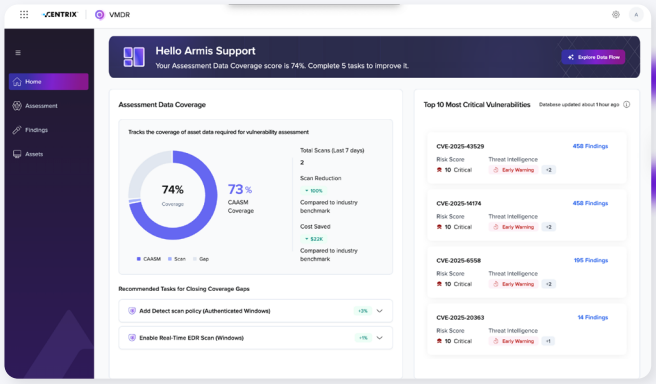

- **Intelligence-driven detection:** Real-time coverage, visibility, and protection for all assets and environments.
- **Continuous and early awareness:** Dynamic discovery powers ongoing protection against emerging vulnerabilities.
- **More accurate, less disruptive:** Customizable targeted scans retrieve only the missing information for fewer scans, fewer false positives, and greater accuracy.
- **Part of a complete CTEM platform:** When paired with Armis Centrix™ for VIPR Pro - Prioritization and Remediation, it delivers a unified detection-to-remediation workflow.

Detection in minutes, not weeks

Armis Centrix™ for Vulnerability Management Detection and Response provides rapid time-to-detection and optimized scanning for proactive detection, complete visibility, and enhanced protection of even the most sensitive devices.

- Continuous discovery reduces mean-time-to-detect from weeks to minutes.
- Fewer false positives and complete visibility provide trust in your vulnerability data.
- Safely detect everything on every asset.
- Vulnerability detection, prioritization, and remediation in one unified platform.

Get the big picture on today's security challenges—and how Armis helps solve them.

Contact **NEWCOM** for more information or a quote!

Armis from ServiceNow protects the entire attack surface and manages an organization's cyber risk exposure in real time.

In a rapidly evolving, perimeter-less world, Armis ensures that organizations continuously see, protect and manage all critical assets - from the ground to the cloud. Armis secures Fortune 100, 200 and 500 companies as well as national governments, state and local entities to help keep critical infrastructure, economies and society stay safe and secure 24/7.
