Armis Centrix™ for Asset Management and Security

See every asset. Understand the risk. Secure what matters.

See, protect, and manage a changing landscape of assets

Organizations have many solutions that know about their assets and risks, but they are siloed, they don't talk to each other and they often contain conflicting information. This makes it very difficult for both IT and security teams to answer simple questions about their asset inventory or security posture, and impacts their ability to detect threats and enforce security policies. Armis Centrix™ for Asset Management and Security continuously discovers all your assets, including IT, IoT, cloud and virtual, managed or unmanaged. Delivered as SaaS platform, Armis seamlessly integrates with hundreds of existing IT and security solutions to quickly discover and prioritize all exposures without disrupting current operations or workflows.

See

Discover, contextualize, enrich, and profile every asset.

Protect

Take measures and prioritize efforts against all exposures.

Manage

Establish workflows and track risk reduction.

Eliminate your blind spots with unified asset intelligence

Full asset inventory - Enrich CMDB - We keep your CMDB up to date and provide the additional information you need for a comprehensive view of your assets. Your CMDB becomes a trusted resource that powers your security operations.

IT and security hygiene and gap analyses - Validate the implementation of your existing security controls and identify gaps in deployment in real time.

Internal and external compliance reporting - Whether it's NIST, CIS Controls, GDPR, NIS2, or other regulations, you can use Armis Centrix™ to ensure your security standards are met, avoid human errors in data collections, and pass your audits with flying colors.

Risk management - Armis Centrix™ help your security team take proactive steps to reduce your attack surface and helps you comply with regulatory requirements to identify and prioritize all risks.

Network threat detection and response - Armis Centrix™ collects and investigates threat forensic data before, during and after an incident to allow your security teams to make informed, data-driven security response decisions.

Network segmentation and enforcement - Armis provides deep visibility into asset behavior and communication patterns, enabling organizations to design effective segmentation strategies and enforce policies based on real-time risk insights.

See, protect, and manage your entire attack surface

Unify your defense with intelligent exposure management

- **Discover all assets** for a complete, real-time, always accurate inventory.
- **Identify and analyze risks** such as: out-of-date OS and apps, default credentials, invalid certificates or compromised devices.
- **Reduce exposure to potential threats** with Cyber Asset Attack Surface Management (CAASM).
- **Detect threats and abnormal activity;** continuously analyze the network traffic using multiple methods.
- **Stop attacks - minimize their impact.** Collect and investigate forensic data to investigate a device's network activity timeline before, during and after an incident.
- **Create policies and queries** that highlight boundary violations, then automate your segmentation processes with intelligent recommendations.
- **Flexible and non-intrusive deployment,** including agentless options for managed and unmanaged devices.

From asset discovery to automated response

- **ROI:** address deployment gaps, eliminate unnecessary spendings and technical debt.
- **Cyber resilience:** take well-informed security decisions based on our world-leading real-time asset inventory capabilities.
- **Reputation and trust:** with adherence to various compliance requirements, your organization is seen and trusted as a secure industry leader.
- **Efficiency:** focus on high business impact risks that are most likely to be exploited.

3x more assets identified than previously known

75% reduction in audit preparation time

351% ROI (up to)
